EARTH WEEK 2008

A long banner is stretched across a concrete wall in front of a brick building. The banner features the text 'EARTH WEEK 2008' in large, colorful letters. The word 'EARTH' is in green, 'WEEK' is in blue, and '2008' is in red. Between the words are several icons: a globe, a recycling symbol, a flower, and a rainbow. The banner is set against a backdrop of a brick building with windows and a bare tree.

Abstract

The primary objective of this study was to investigate the temporal dynamics of GFP expression in *Castanea dentata* embryos. Embryos were collected from a single tree and analyzed for GFP expression at various stages of development. GFP expression was observed in embryos at all stages of development, indicating that GFP expression is a constitutive marker for *Castanea dentata* embryos. The temporal dynamics of GFP expression were investigated by analyzing the expression of GFP in embryos at different stages of development. The expression of GFP was observed in embryos at all stages of development, indicating that GFP expression is a constitutive marker for *Castanea dentata* embryos.

Figure 1: GFP expression in *Castanea dentata* embryos at different stages of development. The embryos were collected from a single tree and analyzed for GFP expression at various stages of development. GFP expression was observed in embryos at all stages of development, indicating that GFP expression is a constitutive marker for *Castanea dentata* embryos.

Figure 2: GFP expression in *Castanea dentata* embryos at different stages of development. The embryos were collected from a single tree and analyzed for GFP expression at various stages of development. GFP expression was observed in embryos at all stages of development, indicating that GFP expression is a constitutive marker for *Castanea dentata* embryos.
