

The past, present, and future of mass timber

Oliver Neve, Structural Engineer, Ramboll

ABSTRACT

Cross laminated timber has been used in Europe for some time now and is gaining traction in the United States. The presentation will offer an opportunity to look back on the history of CLT in the similar UK market and how it has been implemented from a CLT expert. Case studies from over 15 years will be used to demonstrate this versatile building material's key applications. Hybrid structures will also be considered to demonstrate how CLT can be used in tandem with steel and concrete.

BIOGRAPHY

Structural engineer, over 10 years' experience. Cross laminated timber (CLT) expert. Modular construction (DFMA). Application of digitalisation technologies. International speaker.
