A Letter from the Editor:

SNOW! SNOW! SNOW! It won’t be long until we’re all covered with snow! It’s hard to erase this word from about every conversation I have had or overheard within the past 48 hours. Currently, it’s Thursday night and the snow is still coming down hard after the eventful snowstorm that swept through Syracuse starting Tuesday night. Really, I don’t think we could’ve asked for anything better. I mean, I know it’s not the most exciting thing to grab your shovel to dig out your car just to switch it over to the right side of the street, and then realize that you want to get something to eat which requires an adventure on un-plowed streets and sacrificing your freshly shoveled parking spot. Not to mention all the long hours spent by city workers, physical plant, landlords etc. clearing the streets and sidewalks only to see it completely covered over within the hour. But I must say that there is something special about snowstorms that I did see, and after all the hard work and tired arms from shoveling, I think it’s well worth it.

Simply walking down Lancaster, I saw students helping an SU Medical Services truck out of a snow pile, a couple in the street kicking a big bouncy ball back and forth while they cheerfully asked me to join in, and if that wasn’t enough action within five minutes I walked a little farther to see students jumping off their porch into their snow-covered lawns. Later that day, snow mobiles were whizzing down the street and SUVs were dragging boarders from the back of the car. Let’s just say that this newly arrived winter wonderland brought the kid out in all of us. More than that, it also brought out generous acts by complete strangers. People with snow-blowers were offering to clear their neighbor’s sidewalk, complete strangers were pushing peoples’ cars out when they were stuck and others even went to the extent of running down the street with shovels to help the Centro bus get unstuck after it slid out of control. Even though it was Valentine’s Day and many dinner plans accompanied with a romantic evening out on the town were cancelled, I think the snow storm created something that tops all the bouquets of flowers or boxes of chocolates that one can endure, and replaced the traditional activities with a day of excitement, fun, and helping hands.

Editor-In Chief
Over 200 people of all different cultures and backgrounds packed into Nifkin Lounge to take part in International Day at SUNY ESF. The event took place on Saturday, February 3, 2007 from 5pm-9pm. The tables were filled and many people stood around the room or sat on the floor during the performances. There were not enough seats for everyone.

Jaconette Mirck, a grad at SUNY ESF and the MC of the event, was the organizer of the event. She said GSA mostly funded the event, along with some money from Raydora Drummer and the Multicultural Society. International Day was being planned since the end of October and has been an annual event since 1989. It has been growing in popularity each year. Nikhil Bodhankar, an SU grad student going for his Masters of Electrical Engineering said, “It’s really important to advertise this event. The Shutzer Center for International Students did mention International Day, but the SU calendar did not. This event should be advertised more, it has become such a wonderful event, and I know some students that are performing. Facebook also advertised it. People will have to stand during the performance; this event should take place in a bigger room.”

One of the first things that people commented on when asked “what do you like best about the event” was the food. Maria, an ESF student said, “The food was so good. My favorite thing was the food and to see people from all over the world. It’s like the world compacted in one room.” Not only were the people from different countries around the world, but the food was as well, representing traditions from many unique places. There were foods from Europe, Asia, North America, Africa, Latin America and the Caribbean. A range of individuals, including students, professors and members of the community, prepared the food. One ESF grad student commented, “I had a really good time, everybody enjoyed the food, at least my food, they kept coming! There were more people then I expected.” There were two lines reaching from the entrance to either side of Nifkin Lounge, but at least there was enough food to feed everyone who came. Also, a band played guitars while the people ate.

One ESF student said, “There are more ethnic groups then I can name,” referring to how he is enjoying all the diversity found in one place. Kim, another ESF student proclaimed, “look, there’s my flag!” while pointing to one of the many flags hanging from the walls.

Jaconette Mirck started the night by giving a presentation on the History of the Netherlands. All performers were dressed in the traditional clothing of the culture that they were representing. An Irish dance group danced traditional dances as well as a dance they made up entitled “The Garden of Peace.” In a later performance, a belly dancer danced while holding a snake that was coiled around her hand. Each couple of the Ukraine dancers wore traditional clothing from a different region of Ukraine.

Pranathi Adhikari, an Indian dancer who just turned five years old on International Day, lip-synced the words of the song while she danced. A girl that was with her said that she has been practicing the dance since she was three years old. Adhikari was born in Little Falls but thinks she knows everything about Nepal.

La Familia de la Salsa was the final group that performed. Their dance is a traditional circle dance performed on the streets of Cuba. The first part is choreographed; the rest is improvisational with someone calling out dance moves. The only problem that occurred during the night was technology failure with the music, and was the worst with the last performance. The music went on and off throughout their eight minute dance. At first one of the dancers yelled “that’s showbiz.” The improvisational dance also became interactive as the dancer asked the audience to keep a beat by clapping their hands whenever the music stopped. The dance was nevertheless enjoyable to all.
Opinion

Your Student Fee....

Providing you with everything.

Carlos Rosales-Zelaya
Layout Editor Trainee

You’re paying for it! Why not put it to use?
Many students in ESF aren’t conscious of the many facets that constitute their semester payment bill. Besides tuition, there are many other fees included in the overall charges, one of them being the student activity fee. This fee is one of the things most disregarded and overlooked by students attending ESF. According to a poll taken recently by the Undergraduate Student Association, 81% of students don’t know how much the fee is. From my perspective, most people probably do not know what the student activity fee is or what it is used for on campus. If you’re paying for it, why not know what it is and make good use of it?

The student activity fee, which is charged to every scholar each semester, is used for student groups, organizations, and many activities around campus. For example, the student activity fee sponsors most of the Earth Week costs. If you’re thinking of not participating in this event on the week of April 16th you should re-think your choice because you have already paid for it. Most of the clubs and associations here at ESF are supported by the student fee, such as the Soccer club, the Woodsmen’s team, the Habitat for Humanity club, the Forest Engineering club, the Bob Marshall club, the LANDscape club, the Alchemist club, the Baobab society, and the Alpha Xi Sigma club; so why not be involved in what you are paying for? Many campus-wide student activities like morning munches, TGIFs, insomniac events, or more structured activities like the December Soiree, the Spring Banquet, and the Winter Weekend getaway are also paid for by every student that attends this great college.

However, every two years since 2003, the State University of New York administration asks every SUNY school to ballot a referendum in their school, asking every student whether they want the student activity fee to be mandatory or voluntary. This fee has remained mandatory so far. All registered undergraduate students pay the mandatory fee of $45 per semester, and this is what allows SUNY-ESF to fund all the various clubs and social events previously mentioned.

“If the majority of students voted for the fee to be voluntary, it would put clubs and activities on campus in jeopardy,” said Leah Flynn, the assistant director of student activities at ESF. She added that this is because clubs and activities may not have the possibility of having enough funds to support them. So think wisely about your answer when the question gets asked and remember that it’s only a small fee that does big things for you. The next poll will be taken in the last week of March this year.

There is also a smaller fee included in the fall semester’s bill, which is the SU student activity fee. The President of the Undergraduate Student Association, Steve Fox, said, “a portion of the total student activity fee goes to SU, and that allows us to participate in any clubs, committees, organizations, or activities at SU.” He also commented “we only pay a portion of what full-time SU students pay, so we should not think we can do everything at SU for free like ice skate at Tennity ice skating pavilion.”

The bottom line is that students should take advantage of the opportunities here at ESF and explore how the student activity fee is put to use. These opportunities can give students amazing experiences that will last a lifetime. If you would like to get more information come to the Undergraduate Student Association meetings every Monday at 5:15pm in Nilkin lounge and let your voice be heard. Also, join committees and clubs on campus. If you would like to create your own club, come to 110 Bray and talk to Leah Flynn, who is always happy to help.
**A Lecture by Dr. Lauren Heine**

**Amanda Meyer**  
**Judy Crawford**  
**Contributing writers**

Dr. Lauren Heine, Director of Applied Science for the GreenBlue Institute, gave a presentation entitled Green Chemistry and Cradle to Cradle Product Design on Tuesday, February 6, 2007 as part of SUNY-ESF’s Women in Scientific and Environmental Professions Spring Seminar Series. The Faculties of Chemistry, Paper and Bioprocess Engineering and the ESF Women’s Caucus jointly sponsored the event.

Dr. Heine’s lecture focused on material health and green chemistry’s contribution to it. Material health refers to products that are safe to both humans and the environment during their full life cycle, with a focus on design for safe, productive return to nature or industry. Material health is important because materials can directly and indirectly affect the health of entire ecosystems, as well as humans. After defining material health and its importance, Dr. Heine cited examples of both direct and indirect impacts of bad product design. Dr. Heine then turned her attention to strategies.

The four strategies for material health described by Dr. Heine were Know Your Product (Inventory), Know the Potential Impacts (Impact Assessment), Choose Green Chemical Products and Processes, and Remember the Big Picture. “Knowing your product” means identifying all components and ingredients of the product, ideally down to 100 ppm. This strategy includes requiring full ingredient disclosures and creating lists of suppliers who are either preferred (P-list) or should be avoided (X-list) based on their product components.

“Knowing the Potential Impacts” means preventing harmful consequences by understanding the toxicity, hazard, and risks associated with your materials over their full life cycle. Toxicity refers to the adverse effects of exposure to various agents to living organisms and ecosystems. When assessing toxicity, it is important to keep the dose and the timing of the exposure in mind. Hazards include such things as extreme toxicity to humans and ecosystems, bioaccumulation, and more. Risk equals hazard multiplied by exposure.

“Choosing Green Chemical Products and Processes” includes selecting safer and healthier alternatives; designing healthy alternatives in collaboration with suppliers; and looking for emerging green chemistries and technologies. Green chemistry is the design of chemical processes and products to reduce and/or eliminate hazardous substances. Dr. Heine outlined twelve principles of green chemistry and provided examples of products and companies using green chemistry.

Dr. Lauren Heine received her doctorate in Civil and Environmental Engineering from Duke University. She is currently the Director of Applied Science at the non-profit institute GreenBlue. Dr. Heine is also directing the development of GreenGredientsTM and the Sustainable Textile Metrics standard. In addition, she consults and publishes on issues relating to green chemistry, alternatives assessment and sustainable material flows.

The next lecture in this series, Global warming: the science behind the headlines, is scheduled for Tuesday, March 6, and will feature Dr. Brenda Ekowurzel, Climate Scientist, Global Environment Program, Union of Concerned Scientists, Washington, DC. This visit will also be part of Syracuse University’s Women in Science and Engineering Speaker Series. For more information, please visit http://www.esf.edu/womenscaucus.
Around the Quad

The View From the Moon

A Greater Perspective on Our Little Library

Check it out in Moon Library

Betsy Elkins
Library Director

This morning the Green Campus Initiative folks are set up in the Moon Foyer providing coffee to our Moon “customers” to entice participation in their activities. We are happy to support their efforts and I’ll take this opportunity to remind you of ways you can be green in Moon Library.

• If you carry it in, carry it out! ESF students are generally wonderful stewards of this earth and won’t think of dropping papers, food, cigarette butts or other trash on a mountain trail. Why then do we find these things in your Library. This is your space, part of your environment too.

• Use the recycling containers that are provided in the Library. There are many yellow baskets throughout the building for you to recycle paper. In the foyer you will find separate containers for trash, bottles, and batteries. There is even a compost bucket for food scraps.

• Don’t leave your cigarette butts on the ground outside the Library! That’s disgusting; use the butt receptacles (those green stands with a hole in the top that are on the patio.) And don’t smoke close to the building. The “rule” is 20 feet from the building. Non smokers don’t need to inhale your bad habit.

• Use the printer by the Online catalogs responsibly:

1. Think before you print! Just because printing is free you don’t need to print everything you see on the screen. You don’t really need to print out every email or the full catalog record for a library book. You don’t always need to print the entire resource; select only what you really need. Read abstracts and decide what you need. Email items to yourself and look at them later if you can’t decide in a hurry.

2. Be patient. Pushing the print button repeatedly does not speed up the process; it just prints your request as many times as you push the button which creates much wasted paper.

3. Pick up what you printed! We find many print jobs in the printers that no one claimed.

4. Don’t print power point slides on this printer. Use the computer lab for this kind of printing and be sure you set it up to print several slides on one page or use the outline view.

5. Use the scrap paper that is provided for you adjacent to the printer for your notes. But don’t put this paper back in the printer!

6. Excessive printing not only wastes paper it wastes toner (which is very expensive and is bad for the environment) as well.

• Recycle your toner cartridges (printer, fax, etc) in the Library. These cartridges go to ImagineIt, a recycling company in Rochester who gives us up to $5 per cartridge to support Green Campus activities.

• Recycle your reading! Bring us your old novels etc. for the recycled reading shelves in the Library. We also welcome your used DVD’s for our leisure DVD collection, built largely through donations of this kind.

• Read good literature about green issues. The Library (of course) has wonderful resources (printed and online) for your reading pleasure, enlightenment and education. The Library recently acquired Al Gore’s The Inconvenient Truth in print as well as the popular DVD. If you haven’t seen it or read it you must. Check it out!

• Attend Green Campus Initiative Meetings: Every Thursday at 7 p.m. in Niffin Lounge.

Have a great semester. We look forward to seeing you in the Library and helping you with your information needs. Meanwhile, think green thoughts!

Alpha Xi Sigma—Isn’t That a Frat?

Cara Stafford
Staff Writer

No way! Don’t let the Greek letters fool you. In fact, this club is the furthest thing from a fraternity or sorority. If you’ve ever received an invitation e-mail to join Alpha Xi Sigma, you would know that AXS is actually ESF’s Honor Society. Like most other clubs, the Undergraduate Student Association funds us. The difference is that the honor society has been around for almost 100 years. This is not a chapter of a national society, so members don’t have to pay dues.

How do you join? We’re an academically based club, so members must maintain a cumulative GPA of 3.175 or higher. E-mails are sent at the beginning of every semester to students who have these qualifying grades.

What does the club do? We serve the community and benefit local causes through volunteer work and fundraising. If you think the honor society is geeky or uncool, take a look around campus at some of the things we do. We help ESF students study for exams, take a breather after tests; we even dress them! Ever been to a Coffee Haus? AXS is responsible for hosting them, and we hope you join us during Earth Week on April 19 (7pm) for our Spring Coffee Haus in Nifkin Lounge! If you’ve been living under a rock and haven’t been able to come to one, Coffee Haus is an open-mic night with free food and coffee. Lights go down, decorations go up, and anyone with a cool talent performs. Musicians, poets, jugglers, comedians, and dancers are welcome. Bring a couple dollars to get your chance at winning the raffle.

One AXS fundraiser you may have seen is the “Smart Kids Wear Green” T-Shirt. They spoofed the “Real Men (or Women) Wear Orange” shirts over at SU, and come in light and dark green ($12 each). Proceeds benefit the Refugee Resettlement Program of Syracuse and the Jeff Dupuis Memorial Award. AXS also runs Test Files in Small Stores, the place where you can make copies of old ESF exams to study from. Check it out in the basement of Marshall next time you’re worried about an upcoming test.

What are the requirements? Besides keeping grades at or above a 3.175 G.P.A., members must complete 3 hours of off-campus and 2 hours of on-campus community service. The campus day of service, individual projects, or club community service trips fulfill the off-campus requirement. On-campus simply means helping out with fundraising and Coffee Haus events. Attending all meetings is a must. Finally, members must serve on a committee led by an officer during each general body meeting.

When do they meet? Biweekly meetings are 15 minutes long and held on Wednesdays at 5:00p.m. in the Moon conference room (go in the right-hand doors of the library and it’s the room immediately on the right). Remaining meeting dates: Feb. 28, March 21, April 4, and April 18.
Hearing the Tree Fall

Composting at ESF:
An SU Student’s Perspective

Marissa Broe
Contributing Writer

Behind a greenhouse, to the left of a grave-
yard and through a small patch of snow
is what appears to be some sort of animal
cage. For two students at the State University
of New York College of Environmental Science and
Forestry this “cage” is something much more.

The wood and wire structure is a compost bin and
junior Tina Notas’ and freshman Hannah Kane
Morgan’s attempt along with the Green Campus
Initiative at SUNY ESF for a greener campus.

“In 1992 there was a campus greening group
that built a compost bin for campus,” Notas said.
Somewhere along the way the program disap-
peared and Notas has spent a great amount of
time to restore it.

The process, which Notas said, “took awhile,”
required permission from various administra-
tive forces on campus. In order to put the bin on
campus the group went through the SUNY ESF
Physical Plant. Certain considerations such as
odor and small animals entering the bin had to be
evaluated before approval was given she said.

At the end of last semester Notas and the Green
Campus Initiative committee finally received
permission to go forward with the project. Notas
along with a group of students worked together
to build the eight-by-four-feet “holding compost”in, which would serve as the community bin for
campus. This was the same type of system that had

In keeping with the Green Campus Initiative, to
“operate in an environmentally responsible man-
ner” the students partially used recycled materials
from an on-campus reconstruction site to make the
bin.

With the community bin instituted a system of
campus-wide composting could now be imple-
mented. Morgan and Notas along with other
Green Campus Initiative members worked to get
smaller bins approved for on-campus sites. Again
the students were required to get approval from
the Physical Plant Notas said.

Moon Library, Illick Lounge, Gallery Snack Bar,
and the Landscape Architecture studio are just a
few of the sites that now have compost buckets.
Green Campus Initiative members are responsible
for emptying the smaller buckets into the com-

By Marissa Broe

munity bin. Efforts were slightly delayed when
the women tried to expand their program to the
residence halls that house SUNY ESF students.

“The worry was that the bacterial breakdown
part of the compost process would be occurring in
the residence hall Blair said.

Blair contacted his supervisor William Longcore,
who set up a meeting with himself, Blair, and
members of the Syracuse University maintenance
staff to listen to the students’ proposal.

Morgan said that prior to the meeting “the staff
really didn’t want it.”

At the meeting the women were required to com-
municate a proposal that explained the intent of
the program and how it would serve the residence
hall community, Blair said. The case was made
and permission was granted for the implementa-
tion of two compost collection buckets: one on
each of the SUNY ESF floors in Boland.

Morgan is responsible for emptying the compost
buckets at Boland, which she said has had mini-
mal student use.

Despite the minimal usage in the residence hall,
Paul Otteson, the faculty advisor for the Green
Campus Initiative, said students have been very
active in the compost project as a whole.

The campus shared mixed responses with com-
posting. Freshman Chuck Kelkenberg who lives
on the male SUNY ESF floor in Boland admitted
that he does not practice composting.

“I usually do when I am near a bin,” said Zach
Papaleoni a senior at the college. Papaleoni, who
lives off-campus, said that he has a compost pile
accumulating at his house but he needs to learn
how to efficiently set up a composting system.

The next step for the women toward a greener
community is the inclusion of Syracuse Univer-
sity in the composting system. Mark Tewksbury,
the Assistant Director of Food Services at the
university said that he has been contacted about
the initiative and that it is in the very beginning
stages.

The university has been recycling things such as
plastics for 15 to 20 years Tewksbury said. He
added, “This is just another logical step.”

Food Services is interested in composting, but its
reservations concern finding a large enough area
to store the waste.

“We are willing to collect it,” he said in reference
to the waste material, “but we don’t want it to end
up in the trash.”

One place that staff at Syracuse University has
looked into is nearby Ithaca College. Ithaca has
been composting from its dining halls since 1993.

“In 1990 the college was required to pay tip fees,”
Mark Darling, Recycling and Resource Manage-
ment Program Coordinator for Ithaca said. “The
compost was a real incentive to save money for
the college.”

In order for Syracuse University to totally com-
post Darling said it would take “$.5 million,”
but it would ultimately save money. Despite the
immense size of the university Darling said a
compost program is possible.

“If you find commercial operations to take it off
site you can make a partnership,” Darling said
about the university’s compost. Through a com-
mercial partnership Syracuse University could
supply a local farmer with its compost to grow
produce to then use within the university’s food
services Darling said.

Ithaca has also implemented a program for stu-
dents who live in apartments on campus which al-
 lows them to bring their compost to a community
bin for removal. This is a program that the Green
Campus Initiative also has planned for the future.

The Green Campus Initiative intends to install
a community bin near SUNY ESF’s Baker Hall.
Notas and Morgan both said. Many of the streets
located near Baker Hall are residences for students
who will be able to use the bin.

“We’re starting to see our product,” Notas said
referring to the compost program. “It’s exciting.”

“It’s really hard to measure success in big ways,”
said Paul Otteson of the Green Campus Initiative.
“Success is when students working together has an
impact on staff. Students come and go but if you
can get the physical plant people to build this into
the operations of the college it will work”
The Arts

The Tip of the Iceberg
Where lost poems find their home

Untitled
By Liz Kaczynski

Sometimes we know
What we want to do
Other days
Completely clueless

Some days you are late for class
Dent your car
And forget your umbrella

Sometimes the sun feels
Especially good
Or your coffee is
Just right

Some days you can’t
Possibly get out of bed
Or off the couch

And some days you hike 20 miles
And stay up to see
The sunrise

Some days you are
So lonely

Some days you are surrounded
By so many people you
Don’t know what to
Do but it’s ok
Because you want them there

But whatever kind of day it is
It’s always exciting

To see what kind of day
Tomorrow is.

The Sound Spectrum

Funk’n Waffles (Located right under Chuck’s):

**it is the cheapest spring break on campus**
Next Meeting is Feb.27 @7:30pm, 207 Hall of Languages.

Looking for Additional Assistance with Education Expenses?
The Beverly Whaley Scholarship
Sponsored by the Women of the University Community
Available for Academic Year 2007-2008

Female students entering their sophomore, junior or senior year of undergraduate study at ESF are eligible for this $500 award. The scholarship is awarded on the basis of academic merit and financial need and preference may be given to a student from the Adirondack region of New York State.

Applications for the Beverly Whaley Scholarship must be completed by March 7, 2007 and are available in the ESF Development Office, 214 Bray Hall.
Syracuse University Outing Club Presents:

**Banff Mountain Film Festival**

**Tuesday, February 20th 7pm**

**GRANT Auditorium**

**$6 Undergrad/ $10 General Public**

Tickets at Schine Box Office or at EMS in Fayetteville
Club Meetings:

The Knothole Thursday s at 8pm in B9 Marshall hall
Woodsmen Team meets every Monday and Thursday at 6:45pm at the green houses behind Bray hall
Society of American Foresters meets every Monday at 5:15 in 212 Marshall Hall
Syracuse University Outing Club meets every Tuesday at 7:30 in 207 Hall of Languages
Green Campus Initiative meets every Thursday at 7:00pm in Nifkin Lounge
Creative Minds meets Tuesdays @ 5pm @ Illick 11.
ESF Acapella meets most Saturdays @ 4pm in Nifkin lounge.
USA (Undergraduate Student Association) meets every Monday at 5:15pm in Nifkin lounge.
Syracuse Animal Rights Organization: Thursdays, 11/30, 12/7, 7PM, Room 421, Hall of Languages

Get your weekly dose of vitamin BRAIN! Drop in at the ESF Peer Tutoring sessions:

- Zoology: Mondays 6-8pm in 109 Moon
- Calculus: Tuesdays 5-7pm in 109 Moon
- General Chemistry II: Wednesdays 5:30-7:30pm in 109 Moon
- English as a second language: TBA
