

A Case Study on the Intersection of Bioethics and Regulation

Benjamin Zegarelli, JD, Associate in Health Care and Life Science Practice, New York office of Epstein Becker Green

ABSTRACT

Although legal analysis does not typically involve bioethical considerations, cutting edge healthcare products and services involve certain aspects of bioethics and other practical issues when petitioning FDA or other regulatory agencies. This brief case study illustrates how these considerations impact a regulatory attorney's representation of clients in the healthcare technology space.

BIOGRAPHY

Mr. Zegarelli obtained a Master of Science in Organic Chemistry in 2008 from the California Institute of Technology and graduated from the School of Law, Yeshiva University (J.D.) in 2013. He has worked for various entities in the health care industry and was a research chemist in the Discovery Group of a major research-based pharmaceutical and health care company, where he developed synthetic routes to myriad antidepressant/anxiolytic drug candidates. Mr. Zegarelli also previously interned at the Medicare Rights Center's federal policy office in Washington.
