CO-OP OPPORTUNITIES

RockTenn Solvay Mill has openings for four (4) PSE students in our state-of-the-art 100% recycled containerboard mill. The opportunities are for a 30-week co-op, with tentative start dates of December 27, 2012, and June 21, 2013. We would have two students for each of the co-ops. We expect a dedication of 45 hours/week. The rate of pay is to be determined.

The co-op students will be working as Process Engineering Interns under the supervision of experienced Engineers. They will assist the Mill's Process Optimization Group in optimizing processes to maximize production and quality at the lowest unit cost. The Process Engineering Interns participate in the development, execution, and reporting of mill trials and studies.

Interested candidates should forward their resume to:
