

FOREST PROPERTIES STRATEGY MAP

Vision: The SUNY-ESF Forest Properties will be a tightly integrated system of both outdoor – as well as virtual – classrooms and laboratories dedicated to the creation, dissemination and application of knowledge about ecological systems and their management. The ESF Forest Property System will be acknowledged as a key strategic asset, the College forests themselves as paragons of sustainable management, and the forest properties staff as the preeminent internal support services department throughout the SUNY system.

CORE VALUES

Mission: As trustee of and steward for the SUNY-ESF forest property resources, the mission of the Department is to ensure the long-term health, viability, and productivity of the College forests in support of the institution's overall instructional, research, and public service endeavors. The DFP facilitates this purpose through: 1) Efficient and cost-effective asset management of the College's real property, forest and natural resource portfolio; 2) Promotion and facilitation of forest-related teaching, research and demonstration projects; 3) Coordinating the planning, organization and management of the properties; and 4) Providing monitoring, information management, and forest operations support services to our faculty, students, partners and other stakeholders.
