Identification info

Title: New York State Tax Parcel Carbon Stock and Stock Change  
Edition: First  
Date: 2026-02-27T01:00:00  
Presentation: mapDigital  
Abstract: This metadata describes a vector polygon dataset with 633,496 tax parcel features five acres or larger in New York State. The fields contain parcel-level summaries of modeled carbon stocks, stock changes, and land cover type for the period 1990-2023. Total carbon stock values are in MTCO2eq and mean carbon density values are in MTCO2eq/acre. These summaries are based on 30m rasters which were produced with version 1.4 soil, litter, and deadwood models and version 2.0 live carbon models developed by CAFRI. Please contact CAFRI for further information regarding the models used to produce these estimates and the accuracy of the estimates.
