Identification info

Title: New York State Other C 30-year Average 1990-2019
Edition: First
Date: 2026-02-27T01:00:00
Presentation: mapDigital
Abstract: This metadata describes a raster reflecting the average density of combined soil, litter, and deadwood carbon over the 30-year period from 1990-2019. Carbon density values are given in MTCO2eq/acre. Pixel values are averages of annual rasters. Predictions are made for all pixels falling within the New York State polygon. These rasters were produced with version 1.4 carbon pool models developed by CAFRI. Please contact CAFRI for further information regarding the models used to produce this raster, the accuracy of the maps, or any other features of these maps.
