

DEPARTMENT OF ENVIRONMENTAL RESOURCES ENGINEERING

Stephen Shaw, Chair

402 Baker Laboratory

315-470-6633

315-470-6958 (fax)

The Department of Environmental Resources Engineering offers programs that build expertise in core technical competencies (mathematics; physical, chemical, and biological sciences, coding and data analysis) while developing engineering problem solving and design skills. Additionally, students gain deeper domain knowledge in the areas of ecological engineering, geospatial engineering, and water resources engineering. Graduates are well positioned to use technology and science to solve pressing environmental problems while taking into consideration the economic, social, and ecological complications of real-world systems.
