Memo

To: Committee on Curriculum
From: Lindi Quackenbush, Chair, Department of Environmental Resources Engineering
Date: October 4, 2018
Re: Course proposal submission

Please find attached proposals for ERE 697, ERE 698, ERE 699, and ERE 897. These are required courses within the Master of Engineering (M.E.) program that is being developed by the Department of Environmental Resources Engineering (ERE). The M.E. program proposal was approved by CoC on 11/16/17 and approved by Academic Governance on 12/12/17.

These attached course proposals have been reviewed and approved by the ERE Department and are ready for review by CoC. I am also attaching a memorandum from Provost Egiebor that documents his support of hiring a visiting instructor to deliver these courses.
Dear Lindi,

This email is to provide my endorsement of the course proposals for ERE 697, 698, 699, and 897 that you intend to submit to CoC for approval under the auspices of the Department of Environmental Resources Engineering. I am made to understand that these courses are required for the new Master of Engineering (M.E.) degree program that had been previously approved by CoC. The College Administration is willing to support a Visiting Faculty position to help deliver these courses while the program becomes established.

I am glad that ERE is finally getting close to the implementation of the M.E. degree program within the department. Please keep me updated on developments on this.

Best regards,

Nosa
