

Special Topics in Environmental Studies:

Ethics, Culture and Community-based Research

EST 696.01

Online: July 6 - Aug 14, 2015

SUNY College of Environmental Science and Forestry

Training on research ethics combined with cultural diversity will prepare students with new research approaches/methods that are appropriate to environmental field studies.

New models of research that have emerged with community-based partnerships and research with cultural groups will also provide critical training to environmental studies/sciences graduate students.

Students will learn about required human subjects protections, ethical theories, cultural competence/ humility theory, and review environmental field studies for community-based, culturally-appropriate approaches.

Learning Outcomes:

Students will gain new research skills to promote more thoughtful moral consideration of research approaches / methods with diverse groups.

Students will gain experience with preparing to interact with diverse groups in the US and abroad through investigating cultural histories and research experiences of these groups and through colearning strategies and research arrangements used with diverse groups for collaborative projects

***All Environmental Studies, Environmental Science, Conservation Biology, Wildlife, Fisheries, Engineering, Hydrology, and Landscape Architecture graduates are welcome to register.**
