This map and the building descriptions on the reverse side will guide you through a walking tour of our Syracuse campus. The campus is on a hill, with Walters Hall at the top and Centennial Hall at the bottom. Accessible parking approval can be obtained by calling ESF University Police at (315) 470-6667.
Walters Hall is home to the **Chemical Engineering** department. The additions of solar panels, photovoltaic cells, and a green roof demonstrate the building’s environmental adaptability. A fully-functioning paper mill allows Paper Engineering students to design and produce their own paper products. **Bioprocess Engineering** and **Renewable Materials Science** majors can also take advantage of the Wastewater Treatment Lab and the Fermentation Lab.

Bray Hall is home to the **Sustainable Resources Management** department. As the administrative heart of campus, you can easily locate offices like Financial Aid, Counseling Center, Career Services, Student Affairs, Opportunity Programs, Athletics, and University Police. It also houses the Graduate School and Research Programs. Within Bray, students often find themselves in test files where old exams and assignments are used to study for future exams.

The Old Greenhouse is home to the **Office of International Education** (OIE) which serves ESF international students and their dependents, as well as current ESF students interested in education abroad. OIE also acts as the emergency point of contact for all ESF faculty-led programs abroad and students conducting research abroad.

Illick Hall, home to the **Environmental Biology** Department, features seven beautiful glass greenhouses on the roof. They are used for both educational and research purposes and offer volunteer/work opportunities to those who are interested in learning how to care for various plant species. As the main biology building, you will find several large herbariums, an aquatics lab, an entomology collection, and numerous educational labs and classrooms.

Marshall Hall is home to the **Landscape Architecture** and **Environmental Studies** departments. Marshall Hall is newly renovated to feature state-of-art facilities, high-energy efficiency, and improved access. Also in Marshall are the **Division of Interdisciplinary Programs** and the **Digital Storytelling Studio**.

Take a minute to look at the research projects on display around the entrance! Along the walkway made of permeable pavement, you'll find prototypes of the Willow Biomass Project, the American Chestnut Project, and clones of the Robin Hood Oak Tree. The library itself is one of the most complete forestry libraries in the world. There are several offices and services offered like the **Academic Success Center**, **Writing Resource Center**, **the Public Speaking Lab**, **the Math Clinic**, and the **Quiet Study Room**.

The **Café at Moon** offers grab and go beverages and food.

Jahn Laboratory is the high-tech home for ESF’s world-renowned **Chemistry** department. Inside, you'll notice intentional, interactive spaces that encourage collaboration and hands-on learning. The building is chock full of technologies including a polymer processing lab, a computational chemistry lab, and nuclear magnetic resonance instruments.

The **LEED Platinum-Certified Gateway Center** is the hub of campus and home to our **Office of Undergraduate Admissions**. Our Trailhead Café and ESF Bookstore are located on the first floor. Grab a bite to eat and shop for ESF swag and maple syrup, produced at our very own Heiberg Forest! You'll find sustainable features throughout the building like our Combined Heat and Power Plant, rain gardens, and the green roof located on the second floor. Gateway also features a robust display of the **Roosevelt Wildlife Collection**.

Baker Laboratory is home to the **Environmental Resources Engineering, Environmental Science**, and **Construction Management** departments. This **LEED Silver-certified** structure is considered a 'recycled building,' having been stripped down to its 1950's support structure and rebuilt using green technology and materials. Like other academic buildings on campus, you can find high-tech facilities such as the **Wood Products Engineering Lab**, the **Hydrology Lab**, and the **Engineering Design Lab**.

ESF students’ home-away-from-home, **Centennial Hall** (Centen) is a **LEED Gold-certified** residence hall. Each student is provided with an extra-long twin bed, two dressers, a desk and chair, and a closet. Each room also comes with its own minifridge and microwave, private bathroom, and individual thermostat. Centen amenities include study lounges, recreation center, fitness center, laundry rooms, bike storage, community kitchen, and more.
