

Using Landsat to View a Changing New York

This is a natural color image of area on the northeast of Syracuse acquired on April 21, 2013. The light blue in the image represents ice. In April, ice in low elevation areas were already melted, however, in high elevation mountains, it still remained.

Landsat 8, Path 15, Row 30

Natural color image of area on the northeast of Syracuse acquired on April 24, 2014. The area of ice decreased a lot especially on the up right corner of the image compared to the data acquired on 2013. 2014 has a warmer April than 2013.

Landsat 8, Path 15, Row 30
