

ESF in the High School

Field Experience in the Adirondacks

The SUNY-ESF Field Experience is an exciting educational outreach activity that enables qualified high school students to visit our Adirondack campuses, learn about environmental science while studying in the outdoors, and learn about scientific research conducted by ESF faculty, staff and graduate students. Students will also develop confidence, perspectives and skills that will help them meet future challenges. The experience enables students to meet and interact with their peers and teachers outside the general classroom.

"Nature-the sublime, the harsh, and the beautiful-offers something that the street or gated community or computer game cannot." author Richard Louv, *Last Child in the Woods: Saving our Children from Nature-Deficit Disorder*
