

ATTENTION ANGLERS

Help track the St. Lawrence River Muskellunge Fishery

Anglers are needed to collect information on their fishing activities for an ongoing muskellunge research program sponsored by the Thousand Islands Biological Station based in Clayton.

Participants will be:

- Provided with a diary
- Asked to fill out data on each trip
- Return it at the end of the season

Participants will receive:

- Embroidered program hat
- Annual program success summary
- Research and management updates

If you are interested in participation or for more information please contact Dr. John M. Farrell at jmfarrell@esf.edu or call 315-470-6990.

All data is confidential and will help scientists better understand the quality and characteristics of the fishery, benefiting both the fishery and fish populations.
